Las Vegas MAY 2 - 6, 2016
EXPO: MAY 3 - 5

YOUR NETWORK IS
YOUR BUSINESS

Net DevOps and Change Control

Pete Lumbis - @PeteCCDE

Cumulus Networks Systems Engineer

CCIE #28677, CCDE 2012::3

Agenda

- Change Management Today
- The Problems Today
- NetDevOps Toolkit
- Tying it All Together (vDemo)

Pete Who?

CCIE R&S, CCDE (First in Cisco Support)
Former Cisco TAC Routing Escalation
Current **Cumulus Networks** SE/Architect
Network Engineer, Not a Programmer

Leading Questions

- Who thinks their change system works well?

Leading Questions

- Who thinks their change system works well?
 - I assume your manager is here

Leading Questions

- Who thinks their change system works well?
 - I assume your manager is here
- Who lab tests 100% of changes?

Leading Questions

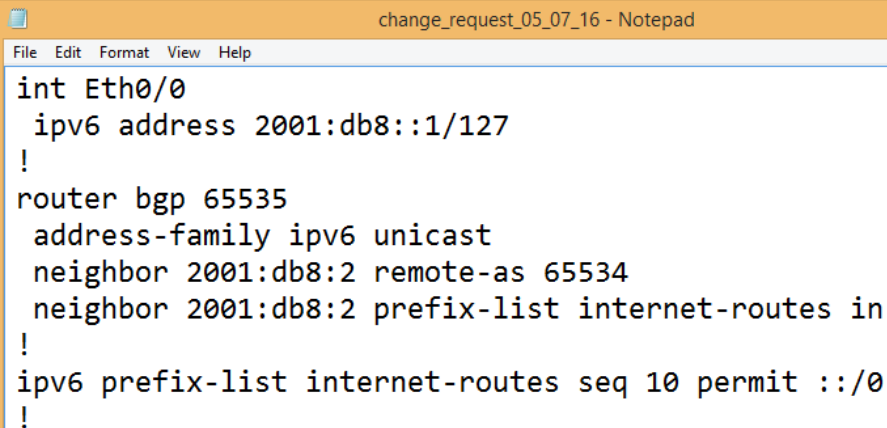

- Who thinks their change system works well?
 - I assume your manager is here
- Who lab tests 100% of changes?
- Who checks servers + apps on changes?

Leading Questions

- Who thinks their change system works well?
 - I assume your manager is here
- Who lab tests 100% of changes?
- Who checks servers + apps on changes?
 - Why is it your users?

Change Management Today

Behave Overview

Behave Overview

```
plumbis:validation plumbis$ behave
Feature: Validate BGP # bgp.feature:1

Scenario: Check BGP Neighbors # bgp.feature:3
  Given BGP is enabled # steps/bgp.py:196 3.697s
  When neighbors are configured # steps/bgp.py:220 0.001s
  Then the neighbors should be up # steps/bgp.py:317 0.000s

Feature: Validate Interfaces are up and IPs are applied # interfaces.feature:1

Scenario: Check interfaces are up # interfaces.feature:3
  Given an interface is configured # steps/interfaces.py:138 0.952s
  Then the interfaces should be up # steps/interfaces.py:162 0.002s

Feature: Validate the webservers can be reached. # website.feature:1
This will validate each server has apache2 configured and running.
Then each server will try to reach every other server and fetch the index page
Scenario: Validate Web Server Access # website.feature:5
  Given a webserver is configured # steps/website.py:124 0.232s
  When apache is running # steps/website.py:136 0.163s
  Then the website should be accessible # steps/website.py:144 0.916s

3 features passed, 0 failed, 0 skipped
3 scenarios passed, 0 failed, 0 skipped
8 steps passed, 0 failed, 0 skipped, 0 undefined
Took 0m5.962s
```

Travis CI

NetDevOps Toolbox Alternatives

NetDevOps Toolbox Alternatives

NetDevOps Toolbox Alternatives

Automation Tools - Ansible

- Configuration Management Software
- Manages SSH connections
- Large collection of libraries for common tasks
- Human Readable

Automation Tools - Ansible

```
- name: Disable AAAA DNS lookups
  replace:
    dest=/etc/gai.conf
    regexp="#precedence ::ffff:0:0/96 10"
    replace="precedence ::ffff:0:0/96 100"

- name: Install Apache
  apt: name=apache2 update_cache=yes
  notify: restart apache

- name: Copy /etc/network/interfaces
  template: src=interfaces.j2 dest=/etc/network/interfaces
  notify: reload networking
```

Automation Tools - Git

- ~~Source Code~~ text file repository
- Automatic file revision/change management
- Built for teams to work on the same files
- Easy to get started, lots of knobs for advanced users

Automation Tools - Git Cont'd

Remote Repository – Central Server hosting files

Local Repository – Your local copy of the remote. Where you change things

Branch – Isolated copy for new features, risky changes

Merge – Apply branch changes to master repository copy (see also: “Pull Request”)

Automation Tools - Git Cont'd

Create Changes in Branches

Merge and Review Changes

Use merge/pull request as an opportunity to review impact of changes

Automation Tools – Git Cont'd

Rollback failures after merge

For for new project/datacenter/office

Infrastructure as Code

- Use software practices for device configurations
- All configuration changes tracked and shared
- Easy to replace and spin up devices

IaC - Vagrant + VirtualBox

- Free hypervisor
- Windows/Mac/Linux support

- Orchestrates VirtualBox
- Define full datacenter of VMs
- One click spin up / spin down

Continuous Integration / Continuous Development

- CI/CD
- CI – Make lots of production changes
 - Probably not good for networks
- CD – Make lots of small config changes
 - Test Early, Test Often

CI/CD Pipeline

- Tools designed to automate tests
- Hook into Git(hub)
- Very flexible, highly customizable

GitLab

Travis CI

Jenkins

Network DevOps

- DevOps is about culture
 - Developers and Operators working together
- Where are the network engineers?
- Death to the silo!
- Network + Dev + Ops
 - Unique skills, collaboration is key!
